

## The many benefits of OmniMetrix monitoring

- Wireless monitoring 24/7/365
- Prevents 95% of fail-to-start situations
- Instant alarm notification via email or text message
- Weekly activity and status reports
- OmniView™ secure web-based management
- Time/date stamped event logs
- Data archiving and export
- Patented, over-the-air technology provides automatic system updates
- Allows for rapid service response

**Is your business ready for  
the next power outage?**

**OMNIMETRIX**  
GLOBAL MONITORING + CONTROL

Keeping You Connected

**Know your generator is ready  
with OmniMetrix monitoring**

Your business  
can't afford to  
lose power  
for even one  
second

Power is a lynchpin for productivity, and all businesses can relate to the pain of a power outage leading to lost data and revenue. Today, OmniMetrix's innovative monitoring solutions can be found in critical settings such as hospitals, universities, governments and data centers. Our generator monitoring solutions are ready to protect what's most important to you, keeping your business up and running during a power outage.

### How it works

Once the OmniMetrix monitor is installed on your generator(s) it will always be on 24/7, collecting data and alerting you instantly if there is a problem. You choose how to receive alerts – via email or text message. Reports can also be viewed on your desktop, tablet or smartphone.

Once an alert is received, you will need to speak to your generator dealer about the alert. If the problem can't be fixed remotely, then the dealer will schedule a service call. The technician will review the data and know what to expect **before** they visit your site. This allows the technician to bring the right equipment and parts so they can take care of the problem immediately.

Many times a generator's failure to start is caused by a mechanical issue such as a dead battery, lack of fuel or block heater failure. OmniMetrix remote monitoring provides operational and historical data and immediately sends an alert when common problems are detected, including:

- Low battery voltage
- Low coolant temperature
- Missed exercise
- Low fuel
- Unhandled alarms
- Plus many more!

For over 20 years OmniMetrix has been an M2M/IoT industry leader dedicated to enhancing the reliability of generators. **Compatible with ALL major generator brands**, OmniMetrix systems report vital operational data to you and your dealer – not just reporting problems, but preventing them.

**During Hurricane Sandy,  
100% of Ocean County,  
New Jersey's OmniMetrix  
monitored generators started  
without failure**
